

Spatial density gradients

A constant field and two directional variations, shown through the same square domain.

01 / UNIFORM

Constant field

FIELD

02 / LOW INTENSITY

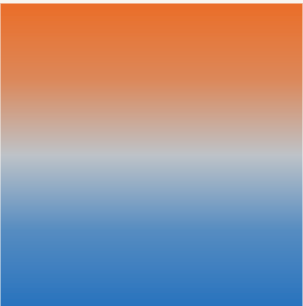

Vertical gradient

FIELD

03 / HIGH INTENSITY

Vertical gradient

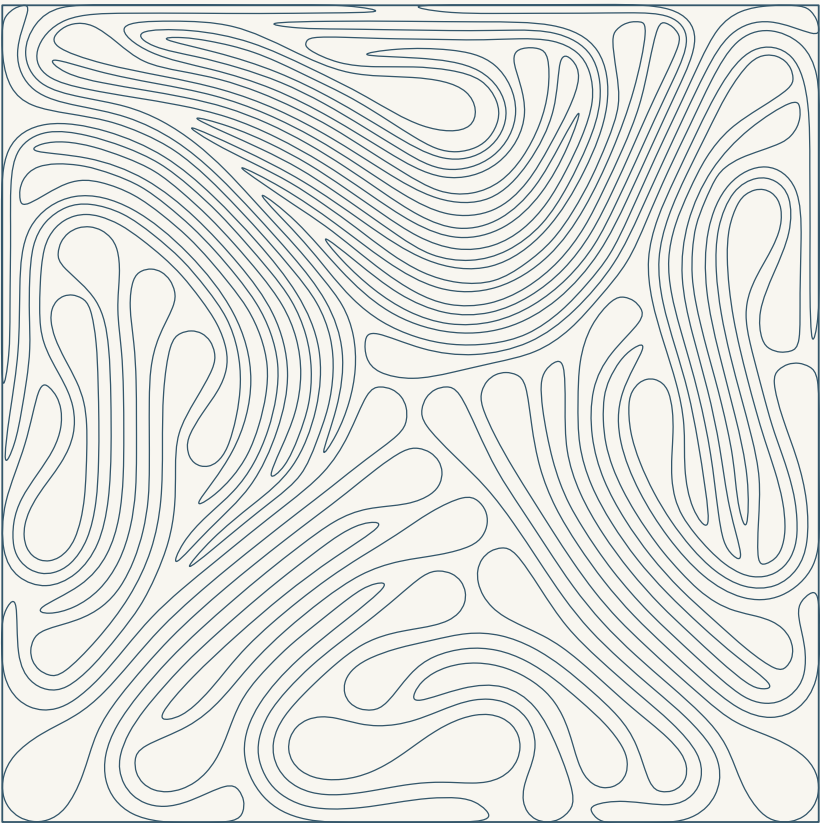

FIELD

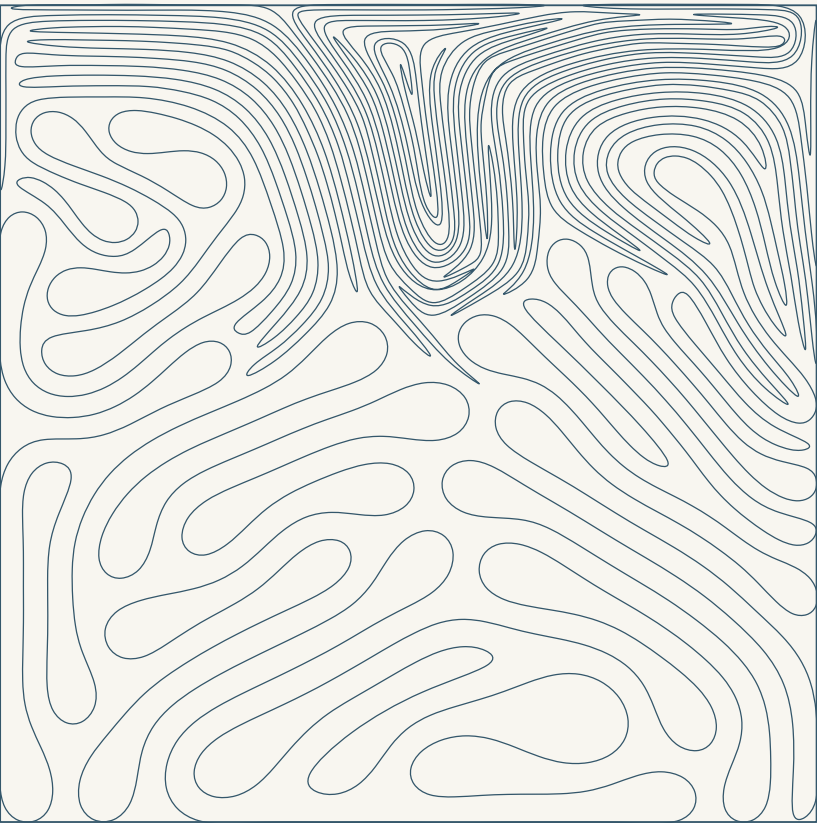

GROWTH / BASELINE DISTRIBUTION

A single field value across the domain.

GROWTH / GRADUAL DIFFERENTIATION

A restrained transition from top to bottom.

GROWTH / STRONGER DIFFERENTIATION

A wider visible contrast across the field.

READING THE STUDY

Field previews retain their exported colours. Growth outputs share the same scale and lineweight.

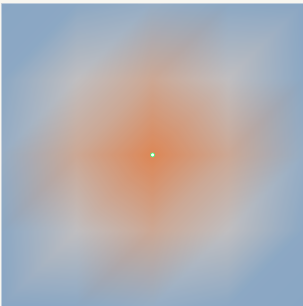

Original field previews above; corresponding source curves below. Field colours are qualitative; no numeric scale is inferred.

Point attractor placement

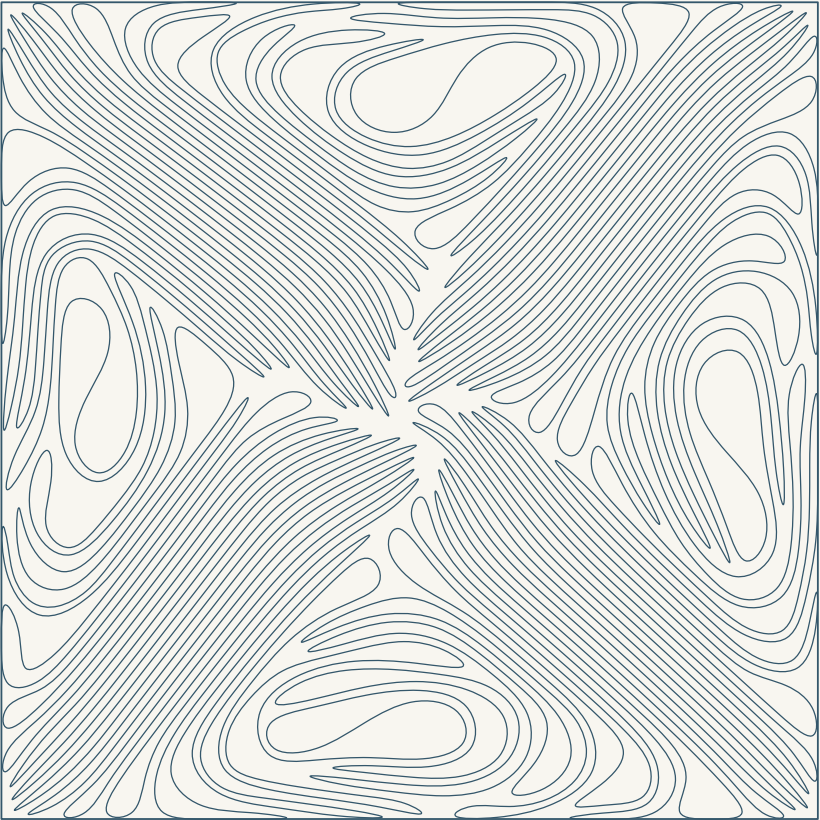

Three point locations redistribute the density field within an unchanged square boundary.

01 / CENTRE

Interior point

FIELD

GROWTH / INTERIOR INFLUENCE

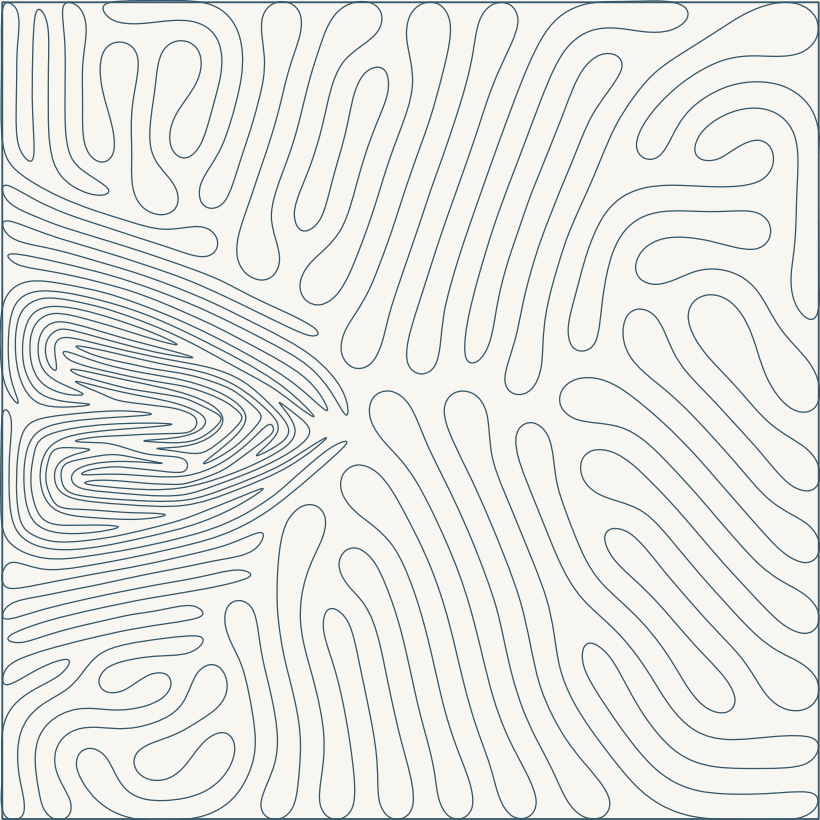

The field is concentrated within the square.

02 / LEFT EDGE

Boundary midpoint

FIELD

GROWTH / EDGE INFLUENCE

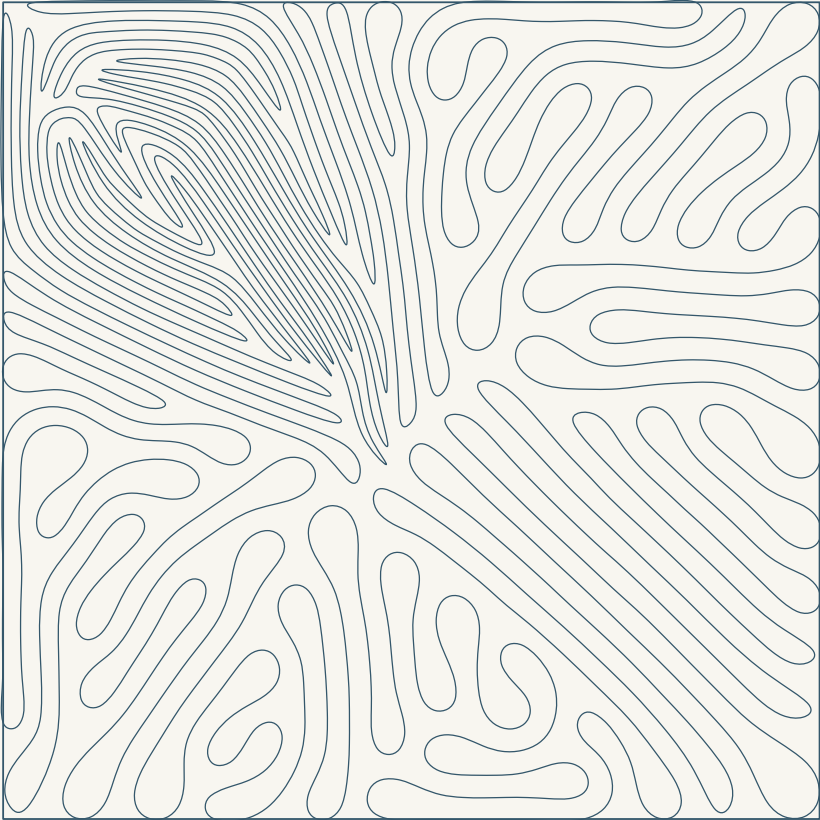

The field meets the centre of the left edge.

03 / UPPER-LEFT CORNER

Boundary corner

FIELD

GROWTH / CORNER INFLUENCE

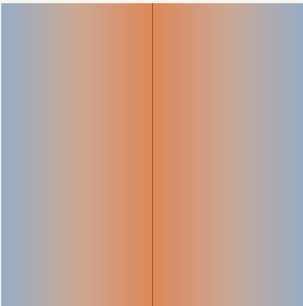

The field is concentrated at a corner.

Curve attractor paths

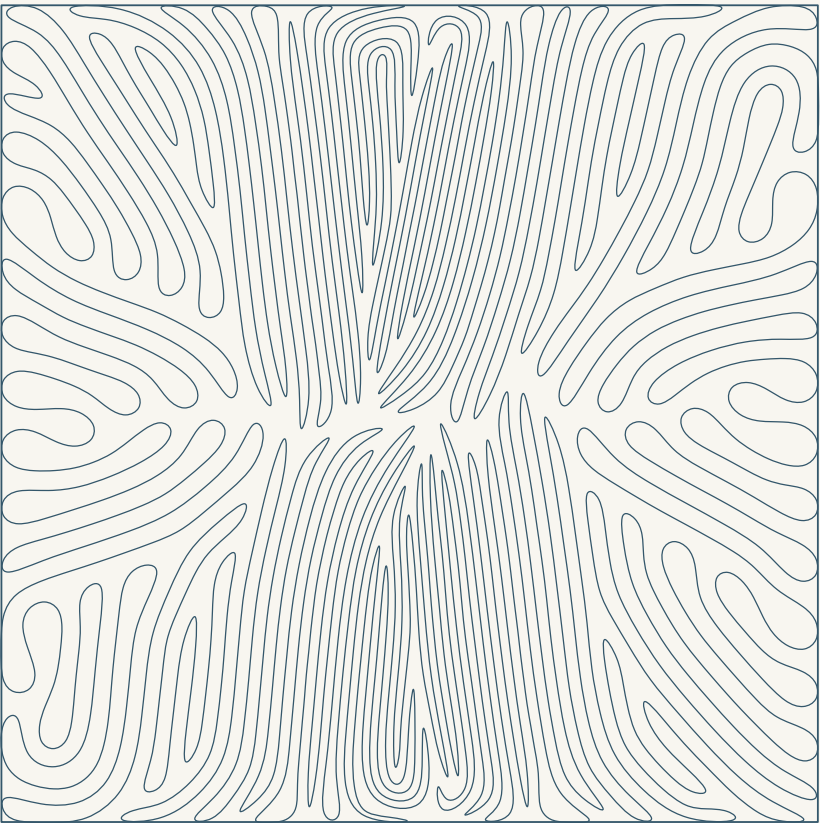

Straight and curved guides organise the density field along continuous paths.

01 / VERTICAL

Central straight guide

FIELD

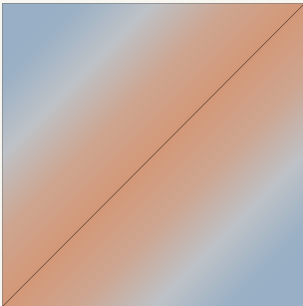

GROWTH / AXIAL FIELD

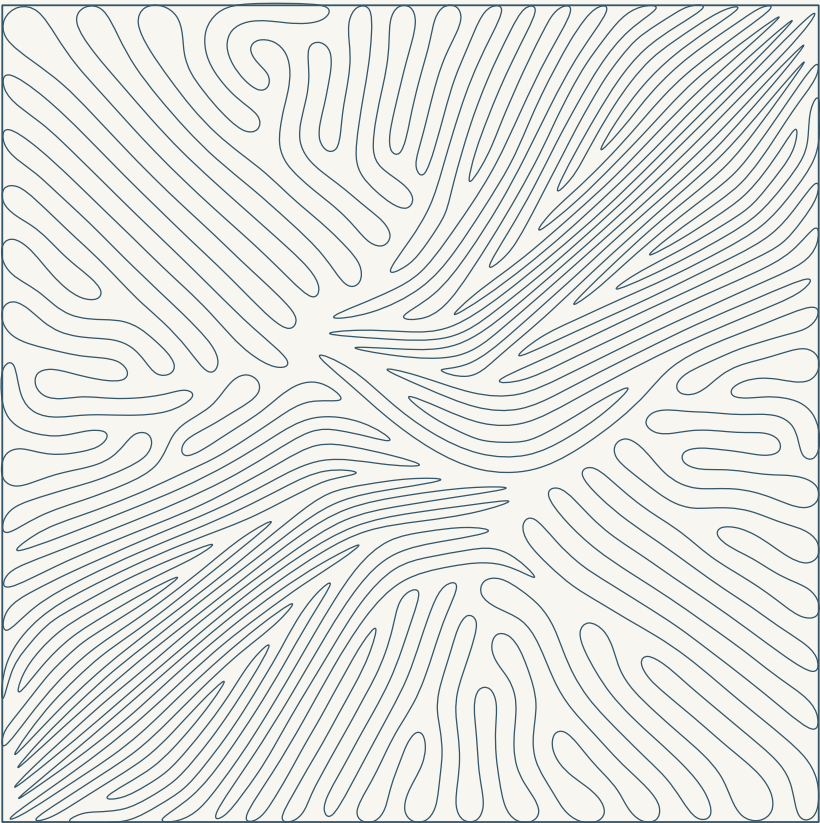

A vertical band passes through the centre.

02 / DIAGONAL

Corner-to-corner guide

FIELD

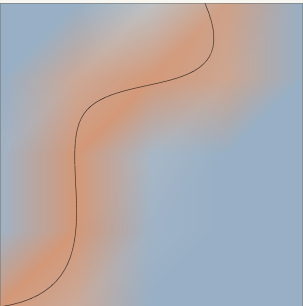

GROWTH / OBLIQUE FIELD

The band spans opposite corners.

03 / FREEFORM

Curved guide

FIELD

GROWTH / CURVED FIELD

The band follows the supplied curved path.

READING THE STUDY

Field previews retain their exported colours. Growth outputs share the same scale and lineweight.

Original field previews above; corresponding source curves below. Field colours are qualitative; no numeric scale is inferred.
